Aero

Models 6221/6231

Accuride presents Aero, a slide that offers exceptionally smooth movement in a durable and compact profile. Available with multiple options, this product gives manufacturers a host of flexible design solutions in appliances. Aero is ideal for shelves, drawers, and baskets in refrigerators or freezers; under-counter refrigerator, microwave, or warming drawers; and other pull-out appliances.

Espresso Machines

Features and Benefits

- Exceptionally **smooth and quiet** movement.
- **Fully concealed:** providing a clean appearance and safe operation without sharp edges or pinch points.
- **Compact profile** has the durability of a larger slide, yet it occupies just a small envelope of valued space.
- **Robust cross section** efficiently absorbs loads and resists vertical deflection, ensuring consistent operation.
- Available in **Easy-Close** with a soft, gentle close or **Self-Close**, which pulls drawers securely closed.
- **Cold resistant, FDA approved lubricant** ensures smooth, reliable movement with minimal affects due to temperature variations.
- **Corrosion-resistant** coating and stainless steel ball bearings
- **Flexible mounting** with standard rear drawer attachment and client-specific front attachment.
- Cabinet member **hole pattern** can be customized to fit client requirements.
- The **mounting surface** of the cabinet member is offset from the drawer member. This offset distance has a given range (see cross sections at left) that allows for flexibility in drawer structure and positioning.
- **¾ extension:** 75-lb. load rating in drawers up to 16" wide.
- **Full extension:** 100-lb. load rating in drawers up to 24" wide.

Availability

- **Lengths:** 10"-22"; please inquire for other lengths or special requirements.
